

Neonatal Congenital Diaphragmatic Hernia

Course Description: This comprehensive module explains congenital diaphragmatic hernia, its signs, symptoms, and treatment options. A discussion of how the pulmonary system is implicated, and the use of ECMO, helps the student to understand the extent of CDH effects. And a case scenario tests the student's understanding of the material.

Course Objectives:

- Explain what is meant by congenital diaphragmatic hernia
- List the most common signs, symptoms, and treatment options of CDH
- Discuss pulmonary involvement, and the use of ECMO in newborns diagnosed with CDH
