

Neonatal Gastrointestinal System – Basic A & P

Course Description: This module reviews the basic anatomy and physiology of the gastrointestinal system. It covers some of the baseline tests and procedures that are performed on the GI system, and describes their diagnoses. A case scenario also tests students' understanding of the material.

Course Objectives:

- Describe the basic anatomy of the gastrointestinal system
- Explain the physiology of digestion and the roles of the gastrointestinal organs
- Review related tests, procedures, and laboratory findings
